

EPH/EPV Horizontal/Vertical Pipeline Pump

Application

EPV/EPH vertical pipeline centrifugal pump is used for transporting water and other liquids with physical and chemical properties similar to water. It is suitable for industrial and urban water supply and drainage, pressurized water supply of high-rise buildings, garden sprinkler irrigation, fire pressurization, distance transportation, HVAC refrigeration cycle, bathroom and other cold and warm water circulation pressurization and equipment supporting, with the operating temperature less than 80°C.

Feature

- 1.Compact structure,small volume, beautiful outlook. The lower barycenter of the vertical structure which coincides with the center of the pump feet strengthens the stability of running and the duration.
2. Easy to mount. Because of the same apertures of both inlet and outlet which also locate on the same central line, the pump can be directly mounted on and part of the pipeline just as a valve. The motor is covered with a rainproof cap so that operation can be done outdoors. Mounting feet are equipped with the pump so that it can be stably mounted.
- 3.Stable running, low noise, high concentricity of components. Bearings of low noise are used for the motor, the impellers are of best dynamic and static balance, no vibration at running and the environment thus being improved.
- 4.No leakage. The shaft is mechanically sealed with carbide alloy wearable material, settling the serious leakage of the filling seal of a centrifugal pump, extending the duration and ensuring the operation place clean and tidy.
5. Easy to maintain. Not necessary to remove the pipeline for check-out and maintenance, only to take out the nuts on the pump lid, the motor and the driving components.
6. The pump, according to the operation condition of the worksite, maybe vertically, horizontally etc. multiways mounted and also according to the requirements for the flow ans stroke, mounted in parallel and/or in series to increase the needed low and stroke.

Working Condition

- 1.Suction pressure $\leq 1.0\text{MPa}$, or pump system maximum working pressure $\leq 1.6\text{MPa}$, that is, pump inlet pressure + pump head $\leq 1.6\text{MPa}$, pump static pressure test pressure is 2.5MPa , please indicate the system working pressure when ordering. When the working pressure of the pump system is greater than 1.6MPa , it should be proposed separately at the time of ordering, so that the flow part and the connection part of the pump are made of cast steel.
- 2.Ambient temperature $<40^{\circ}\text{C}$, relative humidity $<95\%$. The volume content of solid particles in the conveying medium does not exceed 0.1% of the unit volume, and the particle size is $<0.2\text{mm}$. Note: If the medium is used with fine particles, please indicate when ordering, so that the manufacturer uses wear-resistant mechanical seals.

Model Definition

Technical Parameter

Inlet/Outlet range:DN15~DN300
Rated flow:20~1200m³/h
Rated head:3~150m
Max working pressure:20bar

Liquid Temperature

Type 1: 0°C~80°C
Type 2: -20°C~120°C

Product Structure

No	Name	Quantity
1	Pump case	1
2	Impeller	1
3	Impeller nut	1
4	Air discharge valve	1
5	Plug	3
6	Pump cover	1
7	Mechanical seal	1
8	Water-blocking ring	1
9	Motor	1
